

LunchPad · Discord Bot Setup

Connecting lunchpad.darkcosmos.org to the **PSSL Shenanigans** Discord server

WHAT IT DOES

- **48 h before** each RSVP deadline: posts a reminder in your lab channel (meeting, caterer, deadline, response count).
- **24 h before:** sends a personal DM to every linked member who hasn't responded.
- Slash commands: `/rsvp yes|no [request]` and `/meeting` — RSVP without opening the website.
- Members link their Discord once via **Profile** → **Connect Discord** on the website.

WHERE DOES IT RUN?

On your own server — it is the `bot` container of the existing docker-compose stack. **No extra hosting needed.** It opens an outbound connection to Discord; no inbound ports, no public URL. It talks to the web app internally over the Docker network.

1 · CREATE THE DISCORD APPLICATION

1. Go to discord.com/developers/applications → **New Application**, name it *LunchPad*.
2. **OAuth2** tab → copy **Client ID**; click *Reset Secret* → copy **Client Secret**.
3. Same tab, under *Redirects*, add:
`https://lunchpad.darkcosmos.org/auth/discord/callback`
4. **Bot** tab → *Reset Token* → copy the **Bot Token**. (No privileged intents needed.)

2 · INVITE THE BOT TO PSSSL SHENANIGANS

1. **OAuth2** → **URL Generator**: check scopes `bot` + `applications.commands`.
2. Bot permissions: **Send Messages**.
3. Open the generated URL, pick **PSSL Shenanigans**, authorize. (You need Manage Server rights there.)

3 · COPY THE REMINDER CHANNEL'S ID

1. Discord → **Settings** → **Advanced** → **Developer Mode: ON**.
2. In **PSSL Shenanigans**, right-click the channel where reminders should be posted (e.g. `#lab-meetings`) → *Copy Channel ID*.

The server ID is already known — **PSSL Shenanigans** = `1063560400332927076` (pre-filled below).

4 · ENABLE IT ON THE SERVER (AFTER THE FACT)

Skipped Discord during `install.sh`? Just fill in the five values in `.env` — no reinstall needed.

```
cd PSSL-food
nano .env
```

```
DISCORD_CLIENT_ID=...from step 1.2
DISCORD_CLIENT_SECRET=...from step 1.2
DISCORD_BOT_TOKEN=...from step 1.4
DISCORD_GUILD_ID=1063560400332927076
DISCORD_CHANNEL_ID=...channel ID, step 3
```

```
docker compose up -d # recreates the bot with the new config
docker compose logs -f bot # expect: "Logged in as ...",
# "Slash commands registered"
```

5 · TELL THE LAB

Everyone opens lunchpad.darkcosmos.org → **Profile** → **Connect Discord** (one click). Only linked members can get DM reminders and use `/rsvp` — unlinked members still see the channel reminders.

TUNING & TROUBLESHOOTING

`CHANNEL_REMINDER_HOURS` hours before deadline for the channel post (default 48)

`DM_REMINDER_HOURS` hours before deadline for personal DMs (default 24)

- Bot container restart-loops until the token is set — that's expected, harmless.
- No DMs received? The member's privacy settings must allow DMs from server members.
- Slash commands appear seconds after startup (registered per-server, not global).
